***Information Disclosure Statement***

1. The information disclosure statement (IDS) submitted on 12/21/2001 is being considered by the examiner.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The phrase "e.g." renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d). Claims 2-4 are rejected due to dependence on claim 1.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Moose (US 5,166,924).

Regarding claims 1, 2 and 4, Moose discloses a method and apparatus utilizing multi-frequency modulation (MFM) techniques for modulating and demodulating digital information signals (column 3, lines 65-68). The signals are modulated and transmitted by an inverse Fast Fourier Transform (IFFT) and are demodulated in a receiver by a FFT (figures 6, 7 and 9 and column 4, lines 53-68). The transformation length on the transmitter side will be some value. Guard times are inserted in the transmission and received at the receiver (column 5, line 54 to column 6, line 3). The receiver will then receive the transmitted signal length and the added guard length (transmitted over the guard time). The signal values over the guard time have signal amplitudes of zero (column 5, line 67 to column 6, line 3).

Regarding claim 3, the received transforming length will equal twice the transmitted transforming length when the guard interval is the same length as the transforming length.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pal (US 6,353,629) discloses a method of transmitting multiple carrier signals by modulating the signals using an IFFT and demodulating the received signals using a FFT as shown in figures 1B and 4.
